

Full Feature List

TechSpec Elite Pro — Garment Costing, Pricing & Margin Planning Platform

STYLE SETUP MODULE

- Style name, style number, brand, MOQ fields
- Season selector — Spring/Summer/Autumn/Winter plus year codes up to SS34
- 60+ garment categories across 8 groups: Tops, Shirts, Outerwear, Bottoms, Dresses, Swimwear/Lingerie, Footwear, Accessories
- Display currency selector — USD, EUR, GBP, JPY, INR, AUD, CNY, VND
- Manual exchange rate entry with live output conversion (cost inputs remain in USD)
- Target COGS input field for margin planning against a budget
- Production / Sample mode toggle
- Configurable sample cost multiplier (default 3.5x) scoped to landed cost only
- Adjustable wholesale markup with +/- controls
- Adjustable retail markup with +/- controls
- Free-text notes field per style

COSTING ENGINE

- Materials table — unlimited rows, add and remove dynamically
- Per-material fields: description, unit type, quantity, waste %, unit cost in USD
- Yield Calculator — calculates fabric metres from garment measurements
- Yield Calculator covers all 60+ garment types with preloaded benchmarks
- Apply Yield button — one click fills the material row automatically
- Labour table — unlimited operations with direct cost input per operation
- Development cost fields: pattern, sampling, grading, trims, embroidery/print, wash, packaging, labels/tags, QC
- Overhead cost field
- Logistics fields: freight, duty %, agent %, port cost, insurance, last mile, customs, additional landed
- Weighted Size Costing — enter sizes with yield and units to get a weighted average COGS
- Colorway manager — unlimited colorways with individual material uplifts (summed, not averaged)
- Bulk Tier pricing — auto-calculates COGS at 50, 100, 500, and 1,000 units
- Supplier directory — name, category, country, lead time, MOQ per supplier
- Live cost breakdown by category: Materials, Labour, Development, Logistics, Overhead

PRICING + MARGIN MODULE

- Live COGS calculation updating as you type
- Landed Cost calculated as COGS + freight + duties, displayed in summary panel
- Full pricing chain display: Landed Cost → Wholesale → SRP

- Gross Margin % calculated from wholesale price
- Full-price sell-through % input
- Markdown discount % input
- Blended Margin % — accounts for sell-through and markdown scenarios
- Cost Per Wear — unlocked by entering expected wears

EXPORT + SHARING

- PDF export — full costing sheet with all data, pricing chain, and branding
- CSV export — full costing data in spreadsheet format
- JSON export — complete project backup file
- JSON import — reload any exported project
- BOM printout — clean Bill of Materials PDF from the BOM tab

PROJECT + DATA MANAGEMENT

- Save project — browser-based save, no account required. Device and browser specific — export JSON to transfer between devices.
- Saved Projects panel — list of all saved styles with one-click reload
- Revision Snapshots — save point-in-time costing versions
- A/B Compare — capture two costing versions and compare side by side
- Reset All — clears all fields to start a fresh style
- Auto-save behaviour — data persists between sessions on the same device

SEASON PLANNING DASHBOARD

- Add any style to a season range with one click
- Dashboard summary: total styles, average COGS, average SRP, average margin
- Full season table: style, category, season, COGS, wholesale, SRP, GM%
- Clear season button to reset the dashboard

STYLE IMAGES

- Upload up to 4 reference images per style
- Images stored with the project
- Zoom view on click
- Remove with one click

PLATFORM EXPERIENCE & ACCESS

- Dark mode / Light mode toggle (light mode default)
- Fully browser-based — desktop and laptop

- No installation, no download, no app store required
 - Password-secured access
 - All cost inputs in USD — display currency applies to outputs only
 - Tab-based layout: Costing, Pricing, Images, Snapshots, Compare, Season, BOM, Saved Projects
 - Works across major browsers — Chrome, Safari, Edge, Firefox
